

LP5524

LP5524 Parallel LED Driver with PWM Brightness Control in Micro SMD Package

Literature Number: SNVS500

LP5524 Parallel LED Driver with PWM Brightness Control in Micro SMD Package

General Description

The LP5524 is a highly integrated dual-zone LED driver that can drive up to four LEDs in parallel with a total output current of 100mA. Regulated high side internal current sources deliver excellent current and brightness matching in all LEDs.

LED driver current sources are split into two independently controlled banks for driving secondary displays, keypad and indicator LEDs. Brightness control is achieved by applying PWM signals to each enable pin. Default LED current is factory-programmable and an optional external resistor can be used to set LED current to user programmable values.

LP5524 is available in National's tiny 9-bump thin micro SMD package.

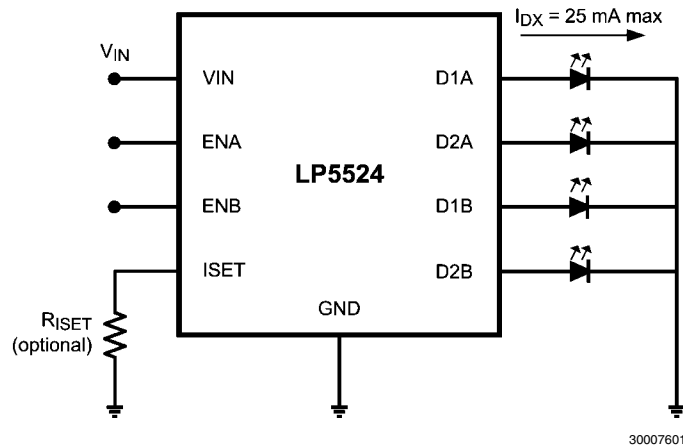

Features

- High side LED driver
- Drives 4 LEDs with Up to 25mA per LED
- Ultra-Small Solution Size:
 - No External Components
 - Micro SMD-9 Package with 0.4 mm pitch: 1.215mm x 1.215mm x 0.6mm (LxWxH)
- 0.4% Typical Current Matching
- PWM Brightness Control
- Over-Current Protection
- Wide Input Voltage Range: 2.7V to 5.5V

Applications

- Sub display Backlight
- Keypad LED Backlight
- Indicator LED

Typical Application

ORDERING INFORMATION

Order Number	Default LED Current (Note 1)	Package Marking	Supplied As	Spec/Flow
LP5524TM-5	5 mA	V2	TNR 250	NOPB
LP5524TMX-5	5 mA	V2	TNR 3000	NOPB

Note 1: Other current options are available upon request, please contact the National Semiconductor Sales Office.

PIN DESCRIPTIONS

Pin	Name	Type	Description
A1	ISET	AI	Current set input
A2	ENB	DI	Enable for bank B
A3	ENA	DI	Enable for bank A
B1	D1B	AO	Current source output, bank B LED1
B2	VIN	P	Power supply pin
B3	D1A	AO	Current source output, bank A LED1
C1	D2B	AO	Current source output, bank B LED2
C2	GND	G	Ground
C3	D2A	AO	Current source output, bank A LED2

A: Analog Pin **D:** Digital Pin **G:** Ground Pin **P:** Power Pin

I: Input Pin **O:** Output Pin

Absolute Maximum Ratings (Notes 2, 3)

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/Distributors for availability and specifications.

V (VIN, DX, ISET)	-0.3V to +6.0V
Voltage on logic pins (ENA, ENB)	-0.3V to +6.0V
Continuous Power Dissipation (Note 4)	Internally Limited
Junction Temperature (T _{J-MAX})	125°C
Storage Temperature Range	-65°C to +150°C
Maximum Lead Temperature (Reflow soldering, 3 times)	(Note 5)
ESD Rating (Note 6)	
Human Body Model	2 kV

Operating Ratings (Notes 2, 3)

Voltage on power pin (VIN)	2.7V to 5.5V
Junction Temperature (T _J) Range	-40°C to +125°C
Ambient Temperature (T _A) Range (Note 7)	-40°C to +85°C

Thermal Properties

Junction-to-Ambient Thermal Resistance (θ _{JA}), TMD09 Package (Note 8)	80 - 125°C/W
---	--------------

Electrical Characteristics (Notes 3, 9)

Limits in standard typeface are for T_J = 25°C. Limits in **boldface** type apply over the operating ambient temperature range (-40°C < T_A < +85°C). Unless otherwise noted, specifications apply to the LP5524 Block Diagram with: V_{IN} = 3.6V, R_{ISET} = 32.4 kΩ, C_{IN} = 100 nF.

Symbol	Parameter	Condition	Min	Typ	Max	Units
I _{VIN}	Shutdown Supply Current	ENA = ENB = 0V		0.2	1	μA
	Active Mode Supply Current	ENA = ENB = H, ISET = open		170	210	μA
I _{DX}	Recommended LED Current		3		25	mA
I _{OUT}	LED Output Current Accuracy	I _{DX} = 5mA, V _{DX} = V _{IN} - 0.2V ISET = open		0.5	5	%
	LED Output Current Accuracy	I _{DX} = 15.9mA, V _{DX} = V _{IN} - 0.2V		0.5	4	%
I _{MATCH}	LED Current Matching (Note 10)	I _{DX} = 15.9mA		0.4	2.5	%
ΔI _{DX} %/ΔV _{IN}	Line Regulation			1		%/V
ΔI _{DX} %/ΔV _{DX}	Load Regulation	V _{DX} < V _{IN} - 0.2V		0.4		%/V
V _{HR}	Minimum Headroom Voltage (V _{IN} - V _{DX})(Note 11)	I _{DX} set to 5 mA		10		mV
		I _{DX} set to 15 mA		30	75	mV
I _{MIRROR}	External R _{ISET} to LED Current Mirroring Ratio			1:416		
V _{ISET}	ISET Reference Voltage			1.237		V
I _{ISET}	ISET Pin Current Range		2.5		62.5	μA
t _{PWM MIN}	Recommended Minimum On Time For PWM Signal			33		μs
V _{IL}	Logic Input Low Level				0.4	V
V _{IH}	Logic Input High Level		1.2			V
I _{IN}	CTRL Input Current	ENA / ENB = 1.2V		1.2	1.9	μA
t _{SD}	Shutdown Delay Time	Delay from ENA and ENB = low to I _{DX} = 0.1 x I _{DX} nom		20	25	μs

Note 2: Absolute Maximum Ratings indicate limits beyond which damage to the component may occur. Operating Ratings are conditions under which operation of the device is guaranteed. Operating Ratings do not imply guaranteed performance limits. For guaranteed performance limits and associated test conditions, see the Electrical Characteristics tables.

Note 3: All voltages are with respect to the potential at the GND pin.

Note 4: Internal thermal shutdown circuitry protects the device from permanent damage. Thermal shutdown engages at T_J=160°C (typ.) and disengages at T_J=140°C (typ.).

Note 5: For detailed soldering specifications and information, please refer to National Semiconductor Application Note AN1112: Micro SMD Wafer Level Chip Scale Package.

Note 6: The Human body model is a 100 pF capacitor discharged through a 1.5 kΩ resistor into each pin. MIL-STD-883 3015.7

Note 7: In applications where high power dissipation and/or poor package thermal resistance is present, the maximum ambient temperature may have to be derated. Maximum ambient temperature (T_{A-MAX}) is dependent on the maximum operating junction temperature (T_{J-MAX-OP} = 125°C), the maximum power dissipation of the device in the application (P_{D-MAX}), and the junction-to ambient thermal resistance of the part/package in the application (θ_{JA}), as given by the following equation: T_{A-MAX} = T_{J-MAX-OP} - (θ_{JA} × P_{D-MAX}).

Note 8: Junction-to-ambient thermal resistance is highly application and board-layout dependent. In applications where high maximum power dissipation exists, special care must be paid to thermal dissipation issues in board design.

Note 9: Min and Max limits are guaranteed by design, test, or statistical analysis. Typical numbers are not guaranteed, but do represent the most likely norm.

Note 10: Matching is the maximum difference from the average.

Note 11: The current source is connected internally between V_{IN} and V_{DX} . The voltage across the current source, $(V_{IN} - V_{DX})$, is referred to a Headroom Voltage (V_{HR}). Minimum Headroom Voltage is defined as the V_{HR} voltage when the LED current has dropped 20% from the value measured at $V_{DX} = V_{IN} - 1V$.

Application Information

ENABLE MODE

The LP5524 has four constant current LED outputs which are split into two independently controlled banks. Each bank has its own enable input. ENA is used to control bank A and ENB is used to control bank B. Both enables are active high and have internal pull-down resistors. When both enables are low part is in low power standby mode. Driving either enable high will activate the part and corresponding LED outputs.

ISET PIN

An external resistor (R_{ISET}) connected to ISET pin sets the output current of all the LEDs. The internal current mirror sets the LEDs output current with a 416:1 ratio to the current through R_{ISET} . The following equation approximates the LED current:

$$I_{DX} = 515 / R_{ISET} \text{ (Amps)}$$

The use of R_{ISET} is optional. If R_{ISET} is not used ISET pin can be left floating or connected to V_{IN} . In these cases LED current is set to default current.

PWM BRIGHTNESS CONTROL

The brightness of LEDs can be linearly varied from zero up to the maximum programmed current level by applying a Pulse-Width-Modulated signal to the ENx pin of the LP5524. The following procedures illustrate how to program the LED drive current and adjust the output current level using a PWM signal.

1. Determine the maximum desired LED current. Use the I_{DX} equation to calculate R_{ISET} .
2. Brightness control can be implemented by pulsing a signal at the ENx pin. LED brightness is proportional to the duty cycle (D) of the PWM signal.

For linear brightness control over the full duty cycle adjustment range, the LP5524 uses a special turn-off time delay to compensate the turn-on time of the device.

If the PWM frequency is much less than 100Hz, flicker may be seen in the LEDs. For the LP5524, zero duty cycle will turn off the LEDs and a 50% duty cycle will result in an average I_{DX} being half of the programmed LED current. For example, if R_{ISET} is set to program LED current to 15 mA, a 50% duty cycle will result in an average I_{DX} of 7.5mA.

LED HEADROOM VOLTAGE

A single current source is connected internally between V_{IN} and DX outputs (D1A, D2A, D1B and D2B). The voltage across the current source, ($V_{IN} - V_{DX}$), is referred to as headroom voltage (V_{HR}). The current source requires a sufficient amount of headroom voltage to be present across it in order to regulate properly.

Figure Output Current vs Headroom Voltage shows how output current of the LP5524 varies with respect to headroom voltage. On the flat part of the graph, the current is regulated properly as there is sufficient headroom voltage for regulation. On the sloping part of the graph the headroom voltage is too small, the current source is squeezed, and the current drive capability is limited. Thus, operating the LP5524 with insufficient headroom voltage across the current source should be avoided.

LED OUTPUTS

If more than 25 mA of output current is required LED outputs can be connected parallel. Connecting LED outputs of different group parallel generates a simply two stage brightness control. With I_{DX} set to 25 mA, enabling one group sets the LED current to 25 mA. Enabling second bank increases the LED current to 50 mA. Unused LED outputs can be left floating or tied to V_{IN} .

Recommended External Components

INPUT CAPACITOR, C_{IN}

Although not required for normal operation, a capacitor can be added to V_{IN} to reduce line noise. A surface-mount multi-layer ceramic capacitor (MLCC) is recommended. MLCCs with a X7R or X5R temperature characteristic are preferred.

CURRENT SET RESISTOR, R_{ISET}

If other than 5 mA current is required, R_{ISET} resistor can be used to adjust the current. For 15.9 mA current 32.4 k Ω re-

sistor is required. Accuracy of the resistor directly effects to the accuracy of the LED current. 1% or better is recommended.

LED

Forward voltage of LED must be less than minimum input voltage minus minimum headroom voltage (V_{HR}). For example with 2.7V input voltage and 20 mA LED current the maximum LED forward voltage is 2.7V - 100 mV = 2.6V.

List of Recommended External Components

Symbol	Symbol Explanation	Value	Unit	Type
C_{IN}	VDD Bypass Capacitor	100	nF	Ceramic, X7R or X5R
R_{ISET}	Current Set Resistor for 15.9 mA LED Current	32.4	k Ω	1%
LEDs		User defined		

Recommended E96 Series (1% Tolerance) Current Set Resistors

R_{ISET} (k Ω)	I_{DX} (mA)	R_{ISET} (k Ω)	I_{DX} (mA)
169	3.0	34.0	15.1
127	4.1	32.4	15.9
102	5.0	30.1	17.1
84.5	6.1	28.7	17.9
73.2	7.0	26.7	19.3
64.9	7.9	25.5	20.2
56.2	9.2	24.3	21.2
51.1	10.1	23.2	22.2
46.4	11.1	22.1	23.3
42.2	12.2	21.5	24.0
39.2	13.1	20.5	25.1
36.5	14.1		

$$I_{DX} = 515 / R_{ISET} \text{ (Amps)}$$

Physical Dimensions inches (millimeters) unless otherwise noted

TMD09XXX (Rev A)

The dimension for X1, X2 and X3 are as given:

- X1 = 1.215 mm ±0.03 mm
- X2 = 1.215 mm ±0.03 mm
- X3 = 0.60 mm ±0.075 mm

NS Package Number TMD09AAA
microSMD-9

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
