

Two Channel SATA 3 Gbps Redriver With Cable Detect

 Check for Samples: [SN75LVCP412CD](#)

FEATURES

- Fully Integrated Cable Detect Feature Compliant with SATA 2.6 Spec
- Enables System Power Savings of up to 200mW When HDD is Not Detected at eSATA Connector
- Low Device Power
 - <200mW (Typ) in Active Mode
 - <20mW (Typ) in Auto Low Power Mode
 - <2mW (Max) in Standby Mode
- Supports Common Mode Biasing for OOB Signaling with Fast Turn-On
- Channel Selectable Output Pre-Emphasis
- Excellent Jitter and Loss Compensation

Capability to Over 20" FR4 Trace

- High Protection Against ESD Transient
 - HBM: 8,000V
 - CDM: 1,500V
 - MM: 200V
- 20 Pin QFN 4x4 Package
- Pin Compatible to LVCP412/LVCP412A

APPLICATIONS

- Notebooks, Desktops, Docking Stations, Servers and Workstations

DESCRIPTION

The SN75LVCP412CD is a dual channel, single lane SATA redriver and signal conditioner supporting data rates up to 3.0Gbps that complies with SATA spec revision 2.6.

The SN75LVCP412CD operates from a single 3.3V supply. Integrated 100-Ω line termination and self-biasing make the device suitable for AC coupling. The inputs incorporate an OOB detector which automatically turns the differential outputs off while maintaining a stable output common-mode voltage compliant to SATA link. The device is also designed to handle SSC transmission per SATA spec.

The SN75LVCP412CD handles interconnect losses at both its input and output. The built-in transmitter pre-emphasis feature is capable of applying 0dB or 2.5dB of relative amplification at higher frequencies to counter the expected interconnect loss. On the receive side the device applies a fixed equalization of 7dB to boost input frequencies near 1.5GHz. Collectively, the input equalization and output pre-emphasis features of the device works to fully restore SATA signal integrity over extended cable and backplane pathways.

The device is hot-plug capable⁽¹⁾ preventing device damage under device *hot*-insertion such as async signal plug/removal, un-powered plug/removal, powered plug/removal or surprise plug/removal.

(1) Requires use of AC coupling capacitors at differential inputs and outputs

ORDERING INFORMATION⁽¹⁾

PART NUMBER	PART MARKING	PACKAGE
SN75LVCP412CDRTJR	412CD	20-pin RTJ reel (large)
SN75LVCP412CDRTJT	412CD	20-pin RTJ reel (small)

(1) For the most current package and ordering information, see the Package Option Addendum at the end of this document, or see the TI web site at www.ti.com.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

PIN ASSIGNMENTS

PIN FUNCTIONS

PIN		I/O TYPE	DESCRIPTION
NO.	NAME		
HIGH SPEED DIFFERENTIAL I/O			
2	RX1N	I, VML	Non-inverting and inverting CML differential inputs for CH 1 and CH 2. These pins are tied to an internal voltage bias by dual termination resistor circuit.
1	RX1P	I, VML	
12	RX2N	I, VML	
11	RX2P	I, VML	
14	TX1N	O, VML	Non-inverting and inverting CML differential outputs for CH 1 and CH 2. These pins are internally tied to voltage bias by termination resistors.
15	TX1P	O, VML	
4	TX2N	O, VML	
5	TX2P	O, VML	
CONTROL PINS			
7	EN	I, LVCMOS	Device enable pin. Internally PU to VCC.
18	CD	O, LVCMOS	Indicates presence or absence of external HDD attachment to LVCP412CD (via eSATA connector).
19	PS	I, LVCMOS	Selects/de-selects cable detect feature of device. Internally PU to VCC.
8, 9	PE1, PE2	I, LVCMOS	Selects pre-emphasis settings for CH 1 and CH 2 per Table 4 . Internally PD to GND.
POWER			
6, 10, 16, 20	VCC	Power	Positive supply, should be 3.3V ±10%.
3, 13, 17	GND	Power	Supply ground

DEVICE SETTINGS
Table 1. Device State

EN	DEVICE STATE	DESCRIPTION
H	Active	ALP ⁽¹⁾ enabled (default state)
L	Standby	Device in standby mode

(1) ALP = Auto low power mode active

Table 2. Enabling/Disabling Cable Detect via PS Pin

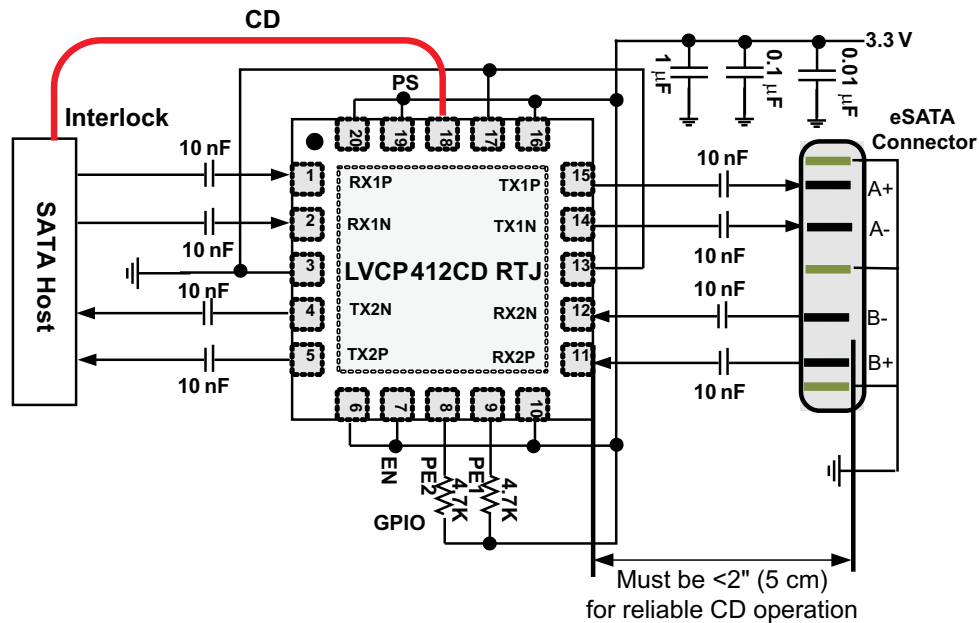

PS	CABLE DETECT FEATURE	DESCRIPTION
L	Disabled	CD feature is not enabled
H	Enabled	CD feature is enabled (default state)

Table 3. Cable Detect Status Indicator Pin

CD	CABLE CONNECTION STATUS	DESCRIPTION
L	Valid connection detected at eSATA port	Ext HDD attached
H	Valid connection NOT detected at eSATA port	Ext HDD NOT attached

Table 4. Output Pre-Emphasis (Device in active state)

PE1	PE2	FUNCTION
0	0	Normal SATA output (default state); CH 1 and CH 2 → 0 dB
1	0	CH 1 → 2.5 dB pre-emphasis; CH 2 → 0 dB
0	1	CH 2 → 2.5 dB pre-emphasis; CH 1 → 0 dB
1	1	CH 1 and CH 2 → 2.5 dB pre-emphasis

- (1) Place supply caps close to device pin.
- (2) Device shown with cable detect mode ON (PS=H, EN=H).
- (3) Output pre-emphasis (PE1, PE2) is shown enabled. Setting will depend on device placement relative to eSATA connector.
- (4) For reliable cable detect operation, CH1 trace length to eSATA connector pin must be within 2" (<5 cm).

Figure 3. Device Implementation

OPERATION DESCRIPTION

INPUT EQUALIZATION

Each differential input of the SN75LVCP412CD has +7dB of fixed equalization in its front stage. The equalization will amplify high frequency signals to correct for loss from the transmission channel. The input equalizer is designed to recover a signal even when no eye is present at the receiver and will affectively support a FR4 trace at the input anywhere from <4 inches to 20 inches or <10 cm to >50 cm.

OUTPUT PRE-EMPHASIS

The SN75LVCP412CD provides single step pre-emphasis from 0dB to 2.5dB at each of its differential outputs. Pre-emphasis is controlled independently for each channel and is set by the control pins PE1 and PE2 as shown in Table 4. The pre-emphasis duration is 0.7 UI or 133ps (typ) at SATA 3.0Gbps speed.

LOW POWER MODES

- Standby Mode (Triggered by EN pin when EN = H→L)
Standby mode is controlled by enable (EN) pin. In its default state this pin is internally pulled high, pulling this pin LOW will put the device in standby mode within 2us (max). In this mode all active components of the device are driven to their quiescent level and differential outputs are driven to Hi Z (open). Max power dissipation is 2mW. Exiting to normal operation requires a maximum latency of 20 us.
- Auto Low Power Mode (Triggered when a given channel is in electrical idle state for >10us and EN = H, PS = X)
Device enters and exits low power mode by actively monitoring input signal (VIDp-p) level on each of its channel independently. When input signal on either or both channel is in the electrical idle state, i.e. VIDp-p < 50mV and stays in this state for > 18 μs the associated channel(s) enter low power state. In this state, output of the associated channel(s) is held to TX VCM and device selectively shuts off some circuitry to lower power by >75% of its normal operating power. Exit time from auto low power mode is less than 50ns (max).

SN75LVCP412CD

SLLSE62 – DECEMBER 2010

www.ti.com

Cable Detect Feature (see [Figure 4](#) and [Figure 5](#))

Cable detect mode (for this mode to be active PS and EN must be tied H via a 4.7kΩ or both pins left as NC. Device must be placed < 2" (or <5cm) from eSATA connector).

To use this feature CH 1 input must be connected to SATA host while CH 2 input to eSATA connector. After power up device sets CD = 0, which makes the SATA Host monitoring this pin go into normal SATA OOB state where host will send out COMRESETs (refer to SATA spec ver. 2.6 Gold) to look for a connected device. The LVCP412CD has a detector circuit that monitors voltage level at its CH1 outputs which changes based on a closed or open termination. CD pin polarity at power up is at L and remains L if connection is found. It will transition to H if connection is not found.

In the event that an eSATA host connected to CH1 of LVCP412CD goes to Partial or Slumber mode and the ext HDD is removed, then CD pin of device will continue to remain L until Host wakes up from Partial or Slumber mode and restarts the link by sending out COMWAKE. After the transmission of first valid OOB signal from host the LVCP412CD will detect that no device is attached to esata socket and thereby pull CD pin H indicating to the host that device is removed.

eSATA host can utilize the polarity of CD pin to shutdown (CD = 1) or turn ON (CD = 0). When host is in shutdown mode then no COMRESETs are transmitted thereby saving power. After having established no connection the LVCP412CD switches to listen mode whereby it listens to COMINTS (refer to SATA spec ver. 2.6 Gold) on CH2. Per SATA spec any SATA compliant peripheral PHY, after power-up, will transmit COMINT in the event that it does not receive a valid COMRESET from the host. If COMINT is detected by the LVCP412CD on CH2 it will switch CD status to L indicating a connection has been found. The SATA host that is monitoring the status of CD pin can now turn-ON as a device is connected and the link training is subsequently established.

Without CD feature, eSATA host sends COMRESETs at frequent intervals(ms) looking for attached HDD thereby burning power even when there is no external HDD attached

With 412CD, eSATA host is automatically turned OFF when no HDD is connected. Power savings of ~100mW - 200mW is possible on host side

Figure 4. Cable Detect

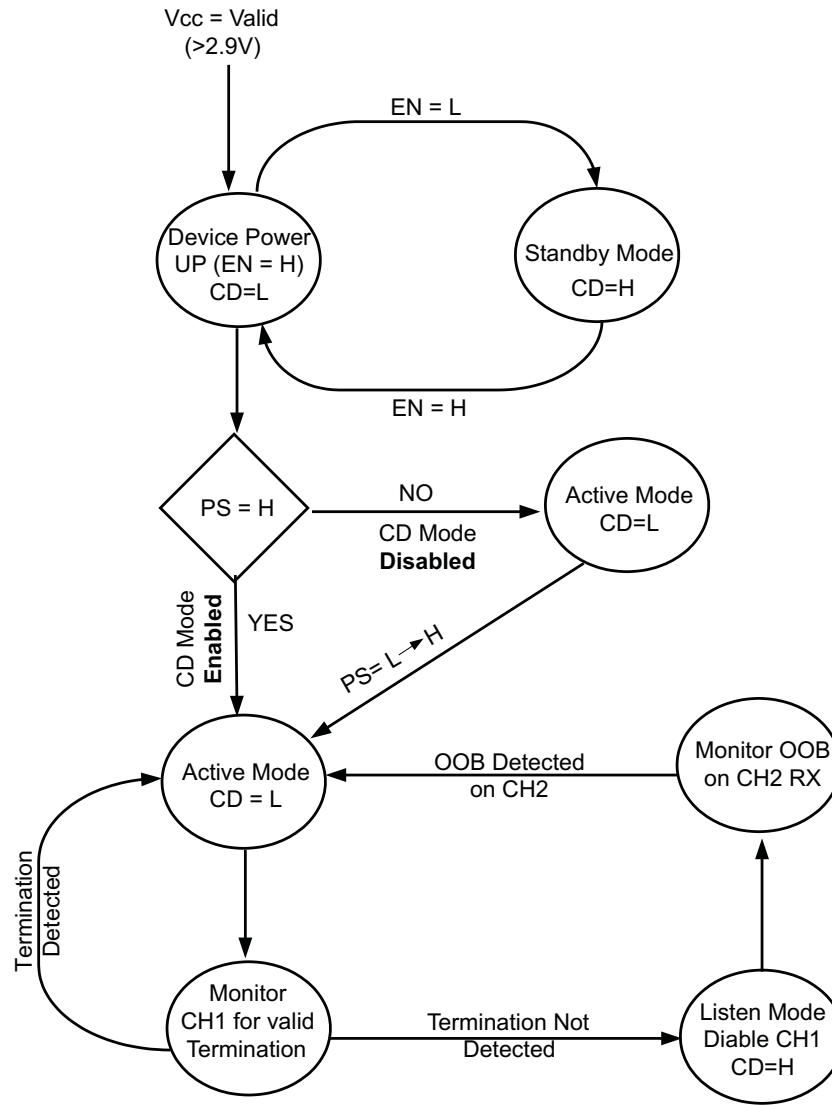

Figure 5. Device Operating States

DEVICE POWER

The SN75LVCP412CD is designed to operate from a single 3.3V supply. Always practice proper power supply sequencing procedures. Apply V_{CC} *first* before any input signals are applied to the device. Power down sequence is in reverse order.

OUT-OF-BAND (OOB) SUPPORT

The squelch detector circuit within the device enables full detection of OOB signaling as specified in SATA spec 2.6. Differential signal amplitude at the receiver input of 50mV_{p-p} or less is not detected as an activity and hence not passed to the output. Differential signal amplitude of 150mV_{p-p} or more is detected as an activity and therefore passed to the output indicating activity. Squelch circuit ON/OFF time is 5ns max. While in squelch mode outputs are held to VCM.

⁽¹⁾ The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBsolete: TI has discontinued the production of the device.

⁽²⁾ Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

⁽³⁾ MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

THERMAL INFORMATION

This package incorporates an exposed thermal pad that is designed to be attached directly to an external heatsink. The thermal pad must be soldered directly to the printed circuit board (PCB). After soldering, the PCB can be used as a heatsink. In addition, through the use of thermal vias, the thermal pad can be attached directly to the appropriate copper plane shown in the electrical schematic for the device, or alternatively, can be attached to a special heatsink structure designed into the PCB. This design optimizes the heat transfer from the integrated circuit (IC).

For information on the Quad Flatpack No-Lead (QFN) package and its advantages, refer to Application Report, QFN/SON PCB Attachment, Texas Instruments Literature No. SLUA271. This document is available at www.ti.com.

The exposed thermal pad dimensions for this package are shown in the following illustration.

PLASTIC QUAD FLATPACK NO-LEAD

- NOTES:
- A. All linear dimensions are in millimeters.
 - B. This drawing is subject to change without notice.
 - C. Publication IPC-7351 is recommended for alternate designs.
 - D. This package is designed to be soldered to a thermal pad on the board. Refer to Application Note, Quad Flat-Pack Packages, Texas Instruments Literature No. SLUA271, and also the Product Data Sheets for specific thermal information, via requirements, and recommended board layout. These documents are available at www.ti.com <<http://www.ti.com>>.
 - E. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC 7525 for stencil design considerations.
 - F. Customers should contact their board fabrication site for recommended solder mask tolerances and via tenting recommendations for vias placed in the thermal pad.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
