

Product Specification

10Gb SFP+ 850nm Limiting Transceiver

TRX10GVP2010

APPLICATIONS

10G Ethernet 10GBASE-SR/SW

MergeOptics SFP+ optical transceiver TRXGVP2010 is compliant with the current SFP+ MSA specifications (SFF-8431 and SFF-8432) and with 10GBASE-SR/SW per IEEE 802.3ae. It is RoHS 6/6 compliant per Directive 2002/95/EC and laser class 1 safety compliant per IEC/CDRH.

The sub watt power consumption and the excellent EMI performance allow system design with high port density.

SUPPORTED STANDARDS

Application	Standard	Data Rate
10G Ethernet LAN	IEEE 802.3ae 10GBASE-SR	10.3125GBd
10G Ethernet WAN	IEEE 802.3ae 10GBASE-SW	9.95328GBd

FEATURES & BENEFITS

- Hot pluggable SFP+ optical transceiver
- 10G Ethernet
- Data rate transparent from 9.95Gbps to 11.3Gbps
- Low power consumption, <0.6W typ.
- Excellent EMI performance
- Transmission distance up to 300m OM3 MMF
- 0°C to +70°C case operating temperature
- 850nm VCSEL laser
- Duplex LC connector
- Laser Class 1
- RoHS 6/6 compliant

FUNCTIONAL DESCRIPTION

The transmit path is based on an AC coupled 100 ohm differentially terminated driver coupled to an 850nm VCSEL. Laser output may be disabled by pulling the transmitter disable (TX_DIS) line high which is its default state when leaving input floating due to an internal pull-up resistor. A fault condition is raised upon detection of an abnormal laser state.

The receive path consists of a receiver optical sub-assembly (ROSA) for optical to electrical conversion, followed by a limiting amplifier boosting the electrical signal. A loss of signal (LOS) status line provides information to facilitate easy link detection.

Complete digital optical monitoring is implemented in compliance to SFF-8472 and made accessible via the 2-wire interface providing real time information about all important module parameters and status information.

1. Module ground pins GND are isolated from the module case.
2. Shall be pulled up with 4.7K-10Kohms to a voltage between 3.15V and 3.45V on the host board.

APPLICATION SCHEMATICS

Recommended electrical connections to transceiver are shown below.

INTERFACING THE TRANSCEIVER

Communication is done by a serial 2-wire interface compatible to the I2C bus protocol. Refer to SFF-8472 for a more detailed register explanation of the registers:

Base Address A0h	
Register	Content
0 - 95	Serial Transceiver ID as defined in SFP MSA
96 - 127	MergeOptics Specific
128 - 255	Reserved

Base Address A2h	
Register	Content
0 - 55	Alarm & Warnings Thresholds & Limits
56 - 95	External calibration constants (not used)
96 ñ 119	Values from real time diagnostic monitoring
120 ñ 127	Not used
128 ñ 247	Customer specific, writable area
248 - 255	Not used

Digital Optical Monitoring

The transceiver offers the ability to monitor important module parameter during operation. All five parameters listed below are continuously monitored for getting information about the current module status. All data is calibrated internally; there is no need for external post processing.

Temperature

Internally measured temperature data is represented as two's complement of a signed 16-bit value in increments of 1/256 °C over a range of -40 to +100°C. Accuracy is better than +/-3%.

Supply Voltage (VCC)

Internally measured supply voltage. Represented as a 16-bit unsigned integer with the voltage defined as the full 16 bit value (0 ñ 65535) with LSB equal to 100 µVolt, which yields to a total range of 0 to +6.55 Volts. Accuracy is better than +/-3%.

Laser Bias Current

The VCSEL bias current is represented as a 16 bit unsigned integer with the current defined as the full 16-bit value (0 ñ 65535) with LSB equal to 2 µA, valid range is 0 to 20 mA. Accuracy is better than +/-10%.

Optical Transmitter Power

TX output power measurement is based on internal monitor diode feedback. Represented as a 16-bit unsigned integer with the power defined as the full 16 bit value (0 ñ 65535) with LSB equal to 0.1 µW. Accuracy is better than +/-3dB over a range of $P_{av_{min}}$ to $P_{av_{max}}$.

Receiver Optical Power

RX input power measurement is based on photodiode diode current. Represented as a 16-bit unsigned integer with the power defined as the full 16 bit value (0 ñ 65535) with LSB equal to 0.1 µW. Accuracy is better than +/-3dB over a range of -12dBm to -1dBm.

Note: The specified characteristics are met within the recommended range of operating conditions regarding temperature and voltage.

EYE SAFETY

This laser based multimode transceiver is a Class 1p product. It complies with IEC 60825-1 Edition 2 and FDA performance standards for laser products (21 CFR 1040.10 and 1040.11) except for deviations pursuant to Laser Notice 50, dated July 26, 2001.

CLASS 1 LASER PRODUCT

To meet laser safety requirements the transceiver shall be operated within the Absolute Maximum Ratings.

Note: All adjustments have been made at the factory prior to shipment of the devices. No maintenance or alteration to the device is required. Tampering with or modifying the performance of the device will result in voided product warranty. Failure to adhere to the above restrictions could result in a modification that is considered an act of "manufacturing", and will require, under law, recertification of the modified product with the U.S. Food and Drug Administration (ref. 21 CFR 1040.10 (i)).
