DESCRIPTION

The CDC5806 is a clock generator which synthesizes video clocks, audio clocks, CPU clock, ASIC clock, USB clock, and a memory card clock from a 54-MHz system clock.

Three phase-locked loops (PLLs) are used to generate the different frequencies from the system clock. On-chip loop filters and internal feedback eliminate the need for external components.

Since the CDC5806 is based on PLL circuitry, it requires a stabilization time to achieve phase-lock of the PLLs. The PLL stabilization time begins after the reference clock input has a stable phase and frequency.

The device operates from a single 3.3-V supply voltage. The CDC5806 device is characterized for operation from -40°C to 85°C.

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

(1) Stresses beyond those listed under absolute maximum ratings may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under recommended operating conditions is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

TIMING REQUIREMENTS

over recommended ranges of supply voltage, load, and operating free-air temperature

PARAMETER		MIN	NOM	MAX	UNIT
REF_IN REQUIREMENTS					
f_{CLK_IN}	LVCMOS REF_IN clock input frequency		54		MHz
t_r / t_f	Rise and fall time REF_IN signal (20% to 80%)			4	ns
$duty_{REF}$	Duty cycle of REF_IN (VDD/2)	40%		60%	
AUDSEL, VIDSEL, MCSEL REQUIREMENTS					
t_r / t_f	Rise and fall time (20% to 80%)			4	ns

(1) If VIDSEL and AUDSEL are switched from from one state to another state at the same time, then the CPUCLK, ASICCLK, USBCLK, or MCCLK are affected. This is due to the selected reserved mode with VIDSEL = M and AUDSEL = M. This mode causes the PLL3 to be bypassed and the REFCLK will be seen with the appropriate divider ratios at the correspondent outputs.
