

3.3 V Clock Synthesizer for DLP™ Systems

FEATURES

- High-Performance Clock Synthesizer
- Uses a 20 MHz Crystal Input to Generate Multiple Output Frequencies
- Integrated Load Capacitance for 20 MHz Oscillator Reducing System Cost
- All PLL Loop Filter Components are Integrated
- Generates the Following Clocks:
 - REF CLK 20 MHz (Buffered)
 - XCG CLK 100 MHz With SSC
 - DMD CLK 200-400 MHz With Selectable SSC
- Very Low Period Jitter Characteristic:
 - ± 100 ps at 20 MHz Output
 - ± 75 ps at 100 MHz and 200–400 MHz Outputs
- Includes Spread-Spectrum Clocking (SSC), With Down Spread for 100 MHz and Center Spread for 200–400 MHz
- HCLK Differential Outputs for the 100 MHz and the 200–400 MHz Clock
- Operates From Single 3.3-V Supply
- Packaged in TSSOP20
- Characterized for the Industrial Temperature Range -40°C to 85°C
- ESD Protection Exceeds JESD22
- 2000-V Human-Body Model (A114-C) – MIL-STD-883, Method 3015

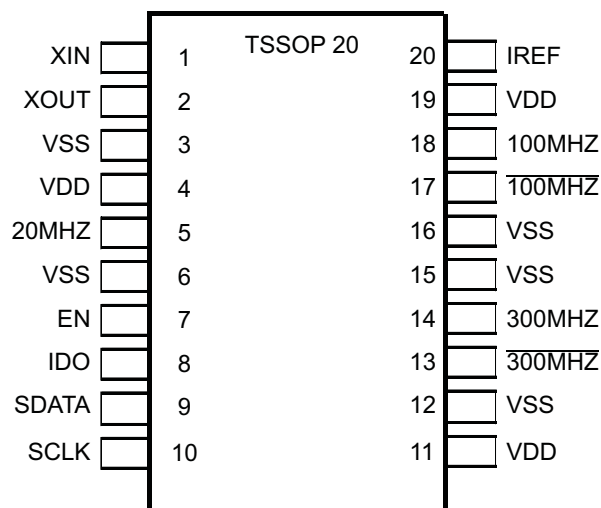

TYPICAL APPLICATIONS

- Central Clock Generator for DLP™ Systems

DESCRIPTION

The CDCDLP223 is a PLL-based high performance clock synthesizer that is optimized for use in DLP™ systems. It uses a 20 MHz crystal to generate the fundamental frequency and derives the frequencies for the 100 MHz HCLK and the 300 MHz HCLK output. Further, the CDCDLP223 generates a buffered copy of the 20 MHz Crystal Oscillator Frequency at the 20 MHz output terminal.

CDCDLP223 PIN ASSIGNMENTS

The 100 MHz HCLK output provides the reference clock for the XDR Clock Generator (CDCD5704). Spread-spectrum clocking with 0.5% down spread, which reduces Electro Magnetic Interference (EMI), is applied in the default configuration. The spread-spectrum clocking (SSC) is turned on and off via the serial control interface.

The 300 MHz HCLK output provides a 200-400 MHz clock signal for the DMD Control Logic of the DLP™ Control ASIC. Frequency selection in 20 MHz steps is possible via the serial control interface. Spread-spectrum clocking with $\pm 1.0\%$ or $\pm 1.5\%$ center spread is applied, which can be disabled via the serial control interface.

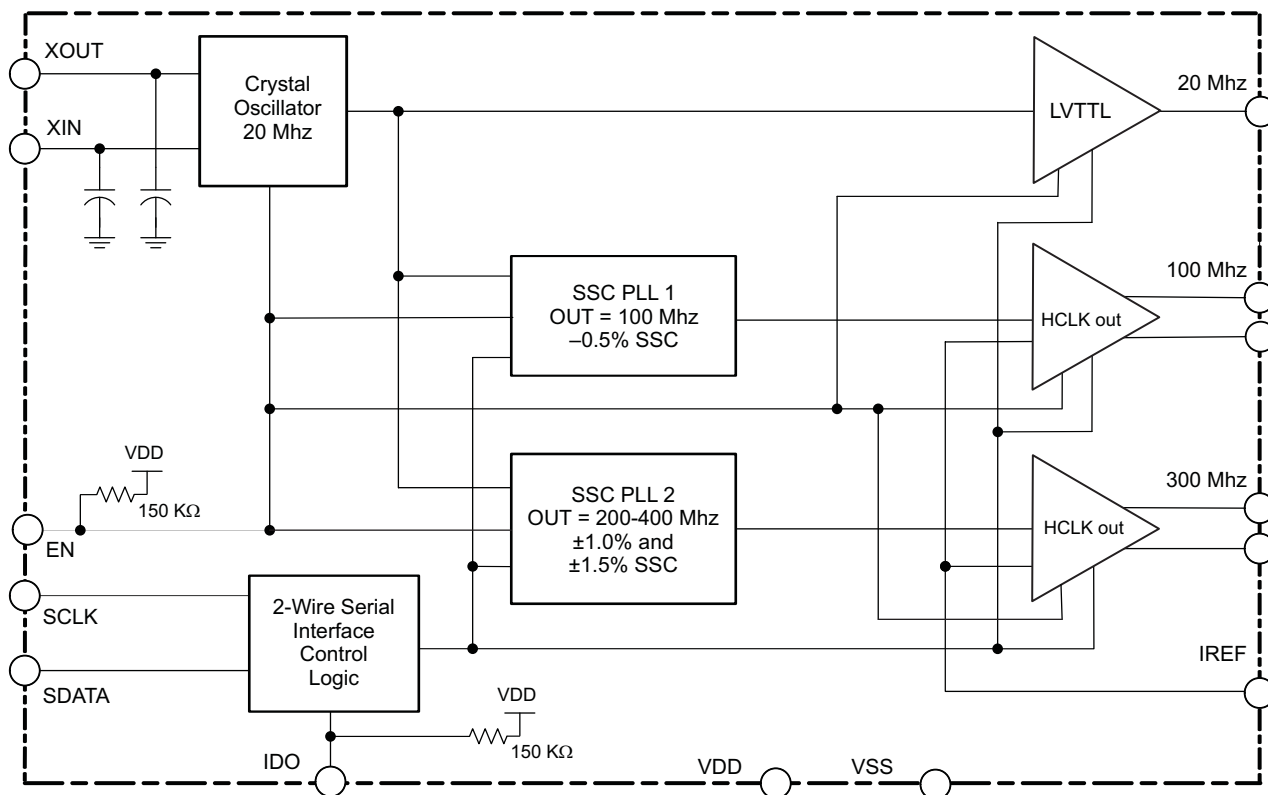

The CDCDLP223 features a fail safe start-up circuit, which enables the PLLs only if a sufficient supply voltage is applied and a stable oscillation is delivered from the crystal oscillator. After the crystal start-up time and the PLL stabilization time, all outputs are ready for use.

The CDCDLP223 works from a single 3.3-V supply and is characterized for operation from -40°C to 85°C .

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

FUNCTIONAL BLOCK DIAGRAM

TERMINAL FUNCTIONS

TERMINAL	PIN	TYPE	DESCRIPTION
XIN	1	I	Crystal oscillator input for 20-MHz crystal in parallel resonance
XOUT	2	O	Crystal oscillator output for 20-MHz crystal in parallel resonance
SDATA	9	I/O Open drain	Data I/O, 2-wire serial interface controller, internal 1-MΩ pullup
SCLK	10	I Interface Clock	Clock input, 2-wire serial interface controller, internal 1-MΩ pullup
20 MHz	5	O LVTTTL	Clock output, 20 MHz (buffered output from crystal oscillator)
100 MHz	18	O HCLK	Clock output for XDR clock generator
100 MHz	17	O HCLK	Clock output for XDR clock generator
300 MHz	14	O HCLK	Clock output for DMD system
300 MHz	13	O HCLK	Clock output for DMD system
VDD	4,11,19	Power	3.3 V Power supply
VSS	3,6,12,15,16	Ground	Ground
IREF	20	O R _{REF} to GND	IREF pin for HCLK output drive-current biasing
EN	7	I LVTTTL	Output enable, 20 MHz, 100 MHz and 200–400 MHz outputs, 150 kΩ pullup, default = logic high
IDO	8	I LVTTTL	Sets 2-wire serial interface ID address bit A0, 150 kΩ pull-up resistor, default = logic high

Table 1. EN Pin (20 MHz, 100 MHz and 300 MHz Clocks)

EN PIN	DESCRIPTION
1	All HCLK outputs, and 20-MHz outputs enabled, detailed device configurations are determined by 2-wire serial interface settings.
0	All HCLK = true Hi-Z, both PLLs are powered down and 20-MHz output in Hi-Z and Crystal Oscillator disabled, EN overrides 2-wire serial interface settings.

ABSOLUTE MAXIMUM RATINGS

over operating free-air temperature range (unless otherwise noted) ⁽¹⁾

		VALUE	UNIT
V _{DD}	Supply voltage range	-0.5 to 4.6	V
V _I	Input voltage range ⁽²⁾	-0.5 to V _{DD} + 0.5	V
V _O	Output voltage range ⁽²⁾	-0.5 to V _{DD} + 0.5	V
	Input current (V _I < 0, V _I > V _{DD})	±20	mA
I _O	Continuous output current	±17.5	mA
T _{stg}	Storage temperature range	-65 to 150	°C

- (1) Stresses beyond those listed under *absolute maximum ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *recommended operating conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) The input and output negative voltage ratings may be exceeded if the input and output clamp-current ratings are observed.

PACKAGE THERMAL IMPEDANCE FOR TSSOP20 PACKAGE⁽¹⁾

Airflow (lfm)	θ _{JA} (°C/W)	θ _{JC} (°C/W)	θ _{JB} (°C/W)	Ψ _{JT} (°C/W)
0	83.0	32	54	0.25
150	77.9	–	–	
250	75.4	–	–	
500	71.4	–	–	

- (1) The package thermal impedance is calculated in accordance with JESD 51 and JEDEC2S2P (high-k board).

RECOMMENDED OPERATING CONDITIONS

		MIN	NOM	MAX	UNIT
T _A	Operating free-air temperature	-40		85	°C
V _{DD}	Supply voltage	3.0	3.3	3.6	V
V _{IH}	High level input voltage SDATA and SCLK	0.7 × V _{DD}		V _{DD}	V
V _{IL}	Low level input voltage SDATA and SCLK	-0.15		0.3 × V _{DD}	V
V _{IL}	Low level input voltage LVTTTL			0.8	V
V _I	thresh Input Voltage threshold LVTTTL		1.40		V
V _{IH}	High level input voltage LVTTTL	2.0			V
I _{OH}	High-level output current LVTTTL			-8	mA
I _{OL}	Low-level output current LVTTTL			8	mA
I _{OH}	High-level output current HCLK/HCLK			-20	mA
I _{OL}	Low-level output current HCLK/HCLK			0	mA
t _{PU}	Power-up time for all VDDs to reach minimum specified voltage (power ramps must be monotonic)	0.05		500	ms

RECOMMENDED CRYSTAL SPECIFICATION⁽¹⁾

		MIN	NOM	MAX	UNIT
f _{xtal}	Crystal input frequency (fundamental)		20		MHz
ESR	Effective series resistance			100	Ω
P _{drive}	Maximum power handling (drive level)	100			μW
C _L	Load capacitance		20		pF

- (1) See DLP™ Control ASIC DDP2230 datasheet for additional requirements.

TIMING REQUIREMENTS⁽¹⁾

over recommended ranges of supply voltage, load and operating free air temperature

PARAMETER		MIN	TYP	MAX	UNIT
XIN, XOUT REQUIREMENTS					
f_{XIN}	Frequency of crystal attached to XIN, XOUT, with $C_L = 20$ pF (2×40 pF) on-die capacitance		20		MHz
2 WIRE SERIAL INTERFACE REQUIREMENTS STANDARD MODE					
f_{SCLK}	SCLK frequency	0		100	kHz
$t_{h(START)}$	START hold time (see Figure 1)	4.0			μ s
$t_{w(SCLL)}$	SCLK low-pulse duration (see Figure 1)	4.7			μ s
$t_{w(SCLH)}$	SCLK high-pulse duration (see Figure 1)	4.0			μ s
$t_{su(START)}$	START setup time (see Figure 1)	4.7			μ s
$t_{h(SDATA)}$	SDATA hold time (see Figure 1)	0		3.45	μ s
$t_{su(SDATA)}$	SDATA setup time (see Figure 1)	250			ns
$t_{r(SDATA)}$	SCLK / SDATA input rise time (see Figure 1)			1000	ns
$t_{f(SDATA)}$	SCLK / SDATA input fall time (see Figure 1)			300	ns
$t_{su(STOP)}$	STOP setup time (see Figure 1)	4.0			μ s
t_{BUS}	Bus free time	4.7			μ s
2 WIRE SERIAL INTERFACE REQUIREMENTS FAST MODE					
f_{SCLK}	SCLK frequency	0		400	kHz
$t_{h(START)}$	START hold time (see Figure 1)	0.6			μ s
$t_{w(SCLL)}$	SCLK low-pulse duration (see Figure 1)	1.3			μ s
$t_{w(SCLH)}$	SCLK high-pulse duration (see Figure 1)	0.6			μ s
$t_{su(START)}$	START setup time (see Figure 1)	0.6			μ s
$t_{h(SDATA)}$	SDATA hold time (see Figure 1)	0		0.9	μ s
$t_{su(SDATA)}$	SDATA setup time (see Figure 1)	100			ns
$t_{r(SDATA)}$	SCLK / SDATA input rise time (see Figure 1)	20		300	ns
$t_{f(SDATA)}$	SCLK / SDATA input fall time (see Figure 1)	20		300	ns
$t_{su(STOP)}$	STOP setup time (see Figure 1)	0.6			μ s
t_{BUS}	Bus free time	1.3			μ s

(1) The CDCDLP223 2-wire serial interface in Send-Mode meets both I²C and SMBus *set up time* t_{su} and *hold time* t_h requirements.

- NOTES:
- A. All linear dimensions are in millimeters. Dimensioning and tolerancing per ASME Y14.5M-1994.
 - B. This drawing is subject to change without notice.
 - C. Body length does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0,15 each side.
 - D. Body width does not include interlead flash. Interlead flash shall not exceed 0,25 each side.
 - E. Falls within JEDEC MO-153

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
