DS21354DK
E1 Single-Chip Transceiver Design Kit Daughter Card

www.maxim-ic.com

GENERAL DESCRIPTION

The DS21354 design kit is an easy-to-use evaluation board for the DS21354 E1 single-chip transceiver (SCT). The DS21354DK is intended to be used as a daughter card with either the DK2000 or the DK101 motherboards. The DS21354DK comes complete with a DS21354 SCT, transformers, termination resistors, configuration switches, line-protection circuitry, network connectors, and motherboard connectors. The DK101/DK2000 motherboard and Dallas' ChipView software give point-and-click access to configuration and status registers from a Windows®-based PC. On-board LEDs indicate receive loss-of-signal and interrupt status, as well as multiple clock and signal routing configurations.

Each DS21354DK is shipped with a free DK101 motherboard. For complex applications, the DK2000 high-performance demo kit motherboard can be purchased separately.

Windows is a registered trademark of Microsoft Corp.

FEATURES

- **Demonstrates Key Functions of the DS21354 E1 SCT Transceiver**
- **Includes DS21354 SCT, Transformers, Bantum, BNC and RJ48 Network Connectors, and Termination Passives**
- **BNC Connections for 75Ω E1**
- **Bantam and RJ48 Connectors for 120Ω E1**
- **Multitap Transformer to Facilitate True Impedance Matching for 75Ω and 120Ω/100Ω Paths**
- **Compatible with DK101 and DK2000 Demo Kit Motherboards**
- **DK101/DK2000 and ChipView Software Provide Point-and-Click Access to the DS21354 Register Set**
- **Software-Controlled (Register Mapped) Configuration Switches to Facilitate Clock and Signal Routing**
- **All Equipment-Side Framer Pins are Easily Accessible for External Data Source/Sink**
- **LEDs for Loss-Of-Signal and Interrupt Status as well as Indications for Multiple Clock and Signal Routing Configurations**
- **Easy-to-Read Silk Screen Labels Identify the Signals Associated with all Connectors, Jumper, and LEDs**
- **Network Interface Protection for Overvoltage and Overcurrent Events Area Available for Further Customization**

BASIC OPERATION

This design kit relies upon several supporting files, which can be downloaded from our website at www.maxim-ic.com/DS21354DK. See the DS21354DK QuickView data sheet for these files.

Hardware Configuration

Using the DK101 processor board:

- Connect the daughter card to the DK101 processor board.
- Supply 3.3V to the banana-plug receptacles marked GND and VCC_3.3V. (The external 5V connector and the TIM 5V supply headers are unused.)
- All processor board DIP switch settings should be in the ON position with exception for the flash programming switch, which should be OFF.
- From the Programs menu, launch the host application named ChipView.EXE. Run the ChipView application. If the default installation options were used, click the Start button on the Windows toolbar and select Programs→ChipView→ChipView.

Using the DK2000 processor board:

- Connect the daughter card to the DK2000 processor board.
- Connect J1 to the power supply that is delivered with the kit. Alternately, a PC power supply can be connected to connector J2.
- From the Programs menu, launch the host application named ChipView.EXE. Run the ChipView application. If the default installation options were used, click the Start button on the Windows toolbar and select Programs→ChipView→ChipView.

General:

- Upon power-up the RLOS LED is lit, as well as the MCLK-2.048MHz and TCLK-2.048MHz LEDs.
- Due to the dual winding transformer, only the 120Ω line build-out configuration setting is needed to cover 75Ω E1 and 120Ω E1.

Quick Setup (Demo Mode)

- The PC loads the program, offering a choice among Demo Mode, Register View, and Terminal Mode. Select Demo Mode.
- The program requests a configuration file, then select DS21354_E1_DSNCOM_DRVR.cfg.
- The Demo Mode screen appears. Upon external loopback, the LOS and OOF indicators extinguish.

Quick Setup (Register View)

- The PC loads the program, offering a choice among Demo Mode, Register View, and Terminal Mode. Select Register View.
- The program requests a definition file, then select DS21354.def.
- The Register View screen appears, showing the register names, acronyms, and values. Note: During the definition file load process, all registers are initialized according to the init value filed in the definition file (because the SETUP field in the .def file is turned on).
- Predefined register settings for several functions are available as initialization files.
  - INI files are loaded by selecting the menu File→Reg Ini File→Load Ini File.
  - Load the INI file DS21354e1_fas_crc4_cas.ini.
  - After loading the INI file the following may be observed:
    The RLOS LED extinguishes upon external loopback.
    The device is now configured for E1 FAS with CRC4 and CAS.

Miscellaneous:

- Clock frequencies and certain pin bias levels are provided by a register-mapped CPLD, which is on the DS21354 daughter card.
- The definition file for this CPLD is named DS215x_35x_CPLD_V2.def. See the *CPLD Register Map* section for definitions.
- All files referenced above are available for download in the section marked “File Locations.”

REGISTER MAP

The DK101 daughter card address space begins at 0x81000000.
The DK2000 daughter card address space begins at:

0x30000000 for slot 0
0x40000000 for slot 1
0x50000000 for slot 2
0x60000000 for slot 3

All offsets given in Table 1 are relative to the beginning of the daughter card address space.

Table 1. Daughter Card Address Map

OFFSET	DEVICE	DESCRIPTION
0X0000 to 0X0015	CPLD	Board identification and clock/signal routing
0X1000 to 0X10ff	Single-Chip Transceiver	Board is populated with one of the following: DS2155, DS2156, DS21352, or DS21354. Please see the data sheet(s) for details.

Registers in the CPLD can be easily modified using ChipView.exe, a host-based user-interface software, along with the definition file named *DS215x_35x_CPLD_V2.def*. Definition files for the SCT are named *DS2155.def*, *DS21352.def*, or *DS21354.def*, depending on the board population option.

Control Registers

The control registers are used primarily to control several banks of FET switches that route clocks and backplane signals. Please note that certain register settings cause line contention, e.g., setting SWITCH1.4 and SWITCH2.4 both to 0 would drive MCLK with both 1.544MHz and 2.048MHz.

Note (DS2156 only): When the UTOPIA backplane is enabled (LEVELS.TUSEL = 1) there is a possibility for contention between the UTOPIA bus master and TSYSCLK, TSER, and RSER. To avoid this, the following switches should be opened when the UTOPIA backplane is enabled: SWITCH1.0, SWITCH2.0, SWITCH3.0, and SWITCH4.1
