MC13850

Low Noise Amplifier with Bypass Switch

1 Introduction

The MC13850 is a cost-effective, high IP3 LNA with low noise figure. This is the leadless package version of the MBC13720 device. As with the MBC13720, this device is designed for general purpose RF applications, yet has excellent high frequency gain and noise figure. An integrated bypass switch is included to preserve high input intercept performance. The input and output match are external to allow maximum design flexibility. The LNA has two selectable IP3 modes, a bypass mode and a standby mode. The MC13850 is fabricated with an advanced RF BiCMOS process using the SiGe:C module and is packaged in the MLPD-8 leadless package.

1.1 Features

- RF input frequency: 400 MHz to 2500 MHz
- Gain: 21 dB at 470 MHz, 14.5 dB at 1960 MHz and 12 dB at 2.4 GHz in high IP3 mode
- Input third order intercept point (IIP3): 10 dBm at 1960 MHz, 13 dBm at 2.4 GHz, and -2.5 dBm at 860 MHz in high IP3 mode

Introduction

- Noise Figure (NF): 1.6 dB at 860 MHz, 1.4 dB at 1960 MHz, and 1.55 dB at 2400 MHz in low IP3 mode
- Output 1 dB compression point (P1dB): 9 dBm at 470 MHz and 11.5 dBm at 1060 MHz in high IP3 mode
- Selectable IP3 mode allows for running at the desired IP3 performance for a receiver's linearity requirements
- Bypass mode has return losses comparable to active mode, for use in systems with filters and duplexers
- Bypass mode improves dynamic range in variable signal strength environments
- Integrated logic-controlled standby mode with current drain <math>< 1\mu\text{A}</math>
- Total supply current: 5 mA at 2.7 V in low IP3 mode and 10 mA in high IP3 mode. Bypass mode <math>< 10\mu\text{A}</math>
- In a receiver system with 20% active mode and 80% bypass mode, the average current drain is 1 mA
- On-chip bias sets the bias point
- Bias stabilized for device and temperature variations
- MLPD-8 leadless package with low parasitics
- 470-860, 900, 1960, and 2400 MHz application circuit evaluation boards with characterization data are available
- Available in tape and reel packaging

Figure 1 shows a simplified block diagram of the MC13850 with the pinouts and location of the Pin 1 designator on the package.

Figure 1. Simplified Block Diagram

1.2 Applications

Ideal for use in any RF product that operates between 400 MHz and 2.5 GHz, and may be applied in:

- Buffer amplifiers
- Mixers
- IF amplifiers
- Voltage controlled oscillators (VCOs)
- Use with transceivers requiring external LNAs
- ISM
- Mobile—Cellular front end LNA, GPS, two-way radios
- Consumer—WLAN, 802.11 b/g
- Auto—RKE, TPMS, GPS, active antenna, wireless security

2 Electrical Specifications

This section contains electrical characteristics of the device as well as maximum ratings and recommended operating conditions. [Table 1](#) lists the maximum ratings for the device.

Table 1. Maximum Ratings¹ (TA=25°C, unless otherwise noted)

Ratings	Symbol	Value	Unit
Supply Voltage	V _{CC}	3.3	Vdc
Storage Temperature Range	T _{stg}	-65 to 150	°C
Operating Ambient Temperature Range	T _A	-40 to 85	°C
RF Input Power	P _{rf}	10	dBm
Power Dissipation	P _{dis}	100	mW
Thermal Resistance, Junction to Case	R _{thetaJC}	400	°C/W

¹ Maximum Ratings are those values beyond which damage to the device may occur. Functional operation must be restricted to the limits in the Recommended Operating Conditions and Electrical Characteristics tables.

[Table 2](#) lists the recommended operating conditions of the device.

Table 2. Recommended Operating Conditions

Characteristic	Symbol	Min	Typ	Max	Unit
RF Frequency	f _{RF}	400	—	2500	MHz
Supply Voltage	V _{CC}	2.3	—	3.0	Vdc
Logic Voltage	—	1.5	—	V _{CC}	Vdc
Input High Voltage	—	1.5	—	V _{CC}	Vdc
Input Low Voltage	V _{CC}	0	—	0.95	Vdc

[Table 3](#) lists the four modes of operation for the device that result from changing the voltage applied to the enable 1 (EN1) and enable 2 (EN2) pins.

Table 3. Truth Table

EN1	EN2	State	Current Consumption
Low	Low	Standby	< 10 μ A
Low	High	Bypass	< 10 μ A
High	Low	High IP3	9.9 mA
High	High	Low IP3	4.7 mA

Table 4 lists the electrical characteristics measured on evaluation boards tuned for typical application frequencies. Further details on the application circuits are shown in Section 4, “Application Information” and details on the boards are shown in Section 5, “Printed Circuit Board and Bill of Materials.”

Table 4. Electrical Characteristics Measured in Frequency Specific Tuned Circuits

4 Application Information

The MC13850 LNA is designed for applications in the 400 MHz to 2.5 GHz range. It has four different modes: Low IP3, High IP3, bypass and standby. The LNA is programmable through the Enable 1 and Enable 2 pins. In Low IP3 mode, current consumption is optimized. Current consumption is higher in High IP3 mode to boost the intercept point performance. The gain difference between Low IP3 and High IP3 modes is typically 1.0 dB, and typically the Low and High IP3 modes have similar noise figures. The internal bypass switch is designed for broadband applications. One of the advantages of the MC13850 is the simplification of the matching network in both bypass and amplifier modes. The bypass switch is designed so that changes of input and output return losses between bypass mode and active mode are minimized. As a result, the mismatch of the LNA input and output is minimized and the matching network design is simplified.

In the design of the external matching network, conjugate matching does not necessarily provide the best noise figure and gain performance. Designing for a balance between noise figure, gain, return losses and intercept point provides circuits that demonstrate overall performance. For a particular application or specification requirement, the matching can be changed to achieve enhanced performance of one parameter. Typical circuits are provided for 470 MHz–860 MHz, 900 MHz, 1.96 GHz and 2.4 GHz applications.

Figure 14 shows the typical application circuit for 470 MHz–860 MHz. The noise figure, input intercept point, gain and return losses are optimized. L1 and C2 act as a low frequency trap to improve the input intercept point.

In Figure 15, the typical application circuit for 900 MHz is shown. The input low frequency trap again is used to maximize the input intercept point. It has moderate IP3 performance for high gain. Figure 16 shows the 900 MHz application circuit with feedback network for higher IP3. Capacitive feedback is used to increase the third order input intercept point while decreasing gain and provides unconditional stability. The corresponding printed circuit boards are shown in Figure 19 through Figure 23. Table 22 lists the bill of materials for the application circuit evaluation boards.

4.1 470 MHz–860 MHz Application

This application was designed to provide NF < 1.4 dB, S21 gain > 21 dB, OIP3 of 10 dBm with return losses better than -10 dB at 470 MHz and NF < 1.3 dB, S21 gain > 17 dB, OIP3 of 13 dBm at 860 MHz. This is a broadband application with application to UHF. The performance can be further optimized for narrowband applications such as RKE at the lower frequency, or wireless security at the higher frequency. Typical performance that can be expected from this circuit at 2.7V is listed in Table 17.

Figure 14 shows the 470 MHz–860 MHz schematic with package pinouts and circuit components.

4.3 900 MHz High IP3 Application

This application was designed to demonstrate performance at 900 MHz using capacitive feedback from the output to input to raise IP3. Typical performance that can be expected from this circuit at 2.75V is listed in Table 19.

Figure 16 shows the *High IP3 900 MHz* schematic with package pinouts and circuit components. This 900 MHz application differs from the 900 MHz application in Section 4.2, “900 MHz Application” in that it uses output to input feedback capacitance to raise the IP3 performance.

C1	27 pF	402	Murata	DC block, input match
C2	0.1 uF	402	Murata	DC block
C3	27 pF	402	Murata	DC block, output match
C4	33 pF	402	Murata	1960 MHz short
C5	0.1 uF	402	Murata	Low freq. bypass
L1	33 nH	402	Murata	Input match
L2	3.3 nH	402	Murata	Input match
L3	2.7 nH	402	Murata	Output match, bias decouple
R1	330 Ω	402	KOA	Logic circuit bias
R2	5 Ω	402	KOA	Lower gain, increase stability
2400 MHz (refer to Figure 25)				
C1	5 pF	402	Murata	DC block, input match
C2	0.1 uF	402	Murata	DC block
C3	27 pF	402	Murata	DC block, output match

Table 22. Bill of Materials for the Application Circuit Boards (continued)

Component	Value	Case	Manufacturer	Comments
C4	33 pF	402	Murata	1960 MHz short
C5	0.1 uF	402	Murata	Low freq. bypass
L1	3 nH	402	Murata	Input match
L2	3.3 nH	402	Murata	Input match
R1	330 Ω	402	KOA	Logic circuit bias
R2	5 Ω	402	KOA	Lower gain, increase stability

6 Packaging

Figure 26 and Figure 27 are the package drawings with dimensions for the MLPD-8, 2 × 2 × 0.6 mm, package.

Figure 26. Outline Dimensions for MLPD-8

NOTES:

1. ALL DIMENSIONS ARE IN MILLIMETERS.
2. DIMENSIONING AND TOLERANCING PER ASME Y14.5M-1994.
3. THIS IS NON JEDEC REGISTERED PACKAGE.
4. COPLANARITY APPLIES TO THE TERMINALS AND ALL OTHER BOTTOM SURFACE METALLIZATION.
5. THIS DIMENSION APPLIES TO METALLIZED TERMINAL AND IS MEASURE BETWEEN 0.15 AND 0.25 FROM THE TERMINAL TIP. IF THE TERMINAL HAS THE OPTIONAL RADIUS ON THE OTHER END OF THE TERMINAL, THIS DIMENSION SHALL NOT BE MEASURED IN THE RADIUS AREA.

Figure 27. Packaging Details

7 Product Documentation

This data sheet is labeled as a particular type: Product Preview, Advance Information, or Technical Data. Definitions of these types are available at: <http://www.freescale.com>.

8 Revision History

Table 23 summarizes the revisions to this document since Rev. 0.

Table 23. Revision History

Revision	Description of Change
0	Initial Release
1	Technical Content Changes include: <ul style="list-style-type: none"> • In Table 4, min and max values added. • Added Table 5–Table 16, S parameters. • Added Figure 2–Figure 9, constant gain and noise figure circles. • Added Figure 10, Figure 11, minimum NF and associated gain. • Added Figure 12, Figure 13, maximum stable gain and forward insertion gain. • Section 4 application circuit performance parameters extensively revised. • Section 5 printed circuit board and application board drawings added. • Table 22 bill of materials for application revised. • Section 6 package drawing changed to MLPD-8 package.
