

General Description

- SDBN500B01 is best suited for switching inductive loads in power switching applications. It improves efficiency and reliability of power switching systems and it can support continuous maximum current of 500 mA. It features NPN transistor with high breakdown voltage and discrete switching diode with high forward surge current. It reduces component count, consumes less space and minimizes parasitic losses. The component devices can be used as a part of a circuit or as a stand alone discrete device.

Features

- NPN Transistor with High Break-Down Voltage
- Switching Diode with High Forward Surge
- Low Switching and Conduction Losses
- Surface Mount Package Suited for Automated Assembly
- Lead Free By Design/RoHS Compliant (Note 1)
- "Green" Device (Note 2)

Mechanical Data

- Case: SOT-363
- Case Material: Molded Plastic, "Green" Molding Compound. UL Flammability Classification Rating 94V-0
- Moisture Sensitivity: Level 1 per J-STD-020C
- Terminal Connections: See Figure
- Terminals: Finish — Matte Tin annealed over Alloy 42 leadframe. Solderable per MIL-STD-202, Method 208
- Marking and Type Code Information: See Page 6
- Ordering Information: See Page 6
- Weight: 0.016 grams (approximate)

Application Details:

NPN transistor (MMBTA06) and Switching diode (BAV70) integrated as one in SDBN500B01 can be used as a discrete entity for general applications or part of a circuit to function as low side switch for sinking current. NPN is selected based on high break-down voltage and maximum collector current range. Switching diode is selected based on instantaneous forward surge current. The Switching diode dissipates very little power because it is on for only a small portion of the switching cycle. It is designed to replace the discrete NPN transistor and a Switching diode in two separate packages into one small package as shown in Figure. It consumes less board space and also helps to minimize conduction or switching losses due to parasitic inductances (e.g. PCB traces) in power switch applications. (Please see Fig. 11 for one example of typical application circuit used in conjunction with DC-DC converter as a part of the power management system).
