

DS90LV001

DS90LV001 800 Mbps LVDS Buffer

Literature Number: SNLS067D

DS90LV001

800 Mbps LVDS Buffer

General Description

The DS90LV001 LVDS-LVDS Buffer takes an LVDS input signal and provides an LVDS output signal. In many large systems, signals are distributed across backplanes, and one of the limiting factors for system speed is the "stub length" or the distance between the transmission line and the unterminated receivers on individual cards. Although it is generally recognized that this distance should be as short as possible to maximize system performance, real-world packaging concerns often make it difficult to make the stubs as short as the designer would like.

The DS90LV001, available in the LLP (Leadless Leadframe Package) package, will allow the receiver to be placed very close to the main transmission line, thus improving system performance.

A wide input dynamic range will allow the DS90LV001 to receive differential signals from LVPECL as well as LVDS sources. This will allow the device to also fill the role of an LVPECL-LVDS translator.

An output enable pin is provided, which allows the user to place the LVDS output in TRI-STATE.

The DS90LV001 is offered in two package options, an 8 pin LLP and SOIC.

Features

- Single +3.3 V Supply
- LVDS receiver inputs accept LVPECL signals
- TRI-STATE outputs
- Receiver input threshold < ± 100 mV
- Fast propagation delay of 1.4 ns (typ)
- Low jitter 800 Mbps fully differential data path
- 100 ps (typ) of pk-pk jitter with PRBS = $2^{23}-1$ data pattern at 800 Mbps
- Compatible with ANSI/TIA/EIA-644-A LVDS standard
- 8 pin SOIC and space saving (70%) LLP package
- Industrial Temperature Range

Absolute Maximum Ratings (Note 1)

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/Distributors for availability and specifications.

Supply Voltage (V_{CC})	-0.3V to +4V
LVC MOS/LVTTL Input Voltage (EN)	-0.3V to ($V_{CC} + 0.3V$)
LVDS Receiver Input Voltage (IN+, IN-)	-0.3V to +4V
LVDS Driver Output Voltage (OUT+, OUT-)	-0.3V to +4V
LVDS Output Short Circuit Current	Continuous
Junction Temperature	+150°C
Storage Temperature Range	-65°C to +150°C
Lead Temperature Range	
Soldering (4 sec.)	+260°C

Maximum Package Power Dissipation at 25°C

M Package	726 mW
Derate M Package	5.8 mW/°C above +25°C
LDA Package	2.44 W
Derate LDA Package	19.49 mW/°C above +25°C
ESD Ratings	
(HBM, 1.5k Ω , 100pF)	$\geq 2.5kV$
(EIAJ, 0 Ω , 200pF)	$\geq 250V$

Recommended Operating Conditions

	Min	Typ	Max	Units
Supply Voltage (V_{CC})	3.0	3.3	3.6	V
Receiver Input Voltage	0		V_{CC}	V
Operating Free Air Temperature	-40	+25	+85	°C

Electrical Characteristics

Over recommended operating supply and temperature ranges unless otherwise specified. (Notes 2, 3)

Symbol	Parameter	Conditions	Min	Typ	Max	Units
LVC MOS/LVTTL DC SPECIFICATIONS (EN)						
V_{IH}	High Level Input Voltage		2.0		V_{CC}	V
V_{IL}	Low Level Input Voltage		GND		0.8	V
I_{IH}	High Level Input Current	$V_{IN} = 3.6V$ or $2.0V$, $V_{CC} = 3.6V$		+7	+20	μA
I_{IL}	Low Level Input Current	$V_{IN} = GND$ or $0.8V$, $V_{CC} = 3.6V$		± 1	± 10	μA
V_{CL}	Input Clamp Voltage	$I_{CL} = -18$ mA		-0.6	-1.5	V
LVDS OUTPUT DC SPECIFICATIONS (OUT)						
V_{OD}	Differential Output Voltage	$R_L = 100\Omega$	250	325	450	mV
ΔV_{OD}	Change in Magnitude of V_{OD} for Complimentary Output States	Figure 1 and Figure 2			20	mV
V_{OS}	Offset Voltage	$R_L = 100\Omega$	1.080	1.19	1.375	V
ΔV_{OS}	Change in Magnitude of V_{OS} for Complimentary Output States	Figure 1			20	mV
I_{OZ}	Output TRI-STATE Current	EN = 0V, $V_{OUT} = V_{CC}$ or GND		± 1	± 10	μA
I_{OFF}	Power-Off Leakage Current	$V_{CC} = 0V$, $V_{OUT} = 3.6V$ or GND		± 1	± 10	μA
I_{OS}	Output Short Circuit Current (Note 4)	EN = V_{CC} , V_{OUT+} and $V_{OUT-} = 0V$		-16	-24	mA
I_{OSD}	Differential Output Short Circuit Current (Note 4)	EN = V_{CC} , $V_{OD} = 0V$		-7	-12	mA
LVDS RECEIVER DC SPECIFICATIONS (IN)						
V_{TH}	Differential Input High Threshold	$V_{CM} = +0.05V$, +1.2V or +3.25V		0	+100	mV
V_{TL}	Differential Input Low Threshold		-100	0		mV
V_{CMR}	Common Mode Voltage Range	$V_{ID} = 100mV$, $V_{CC} = 3.3V$	0.05		3.25	V
I_{IN}	Input Current	$V_{IN} = +3.0V$	$V_{CC} = 3.6V$ or 0V	± 1	± 10	μA
		$V_{IN} = 0V$		± 1	± 10	μA
ΔI_{IN}	Change in Magnitude of I_{IN}	$V_{IN} = +3.0V$	$V_{CC} = 3.6V$ or 0V	1	6	μA
		$V_{IN} = 0V$		1	6	μA
SUPPLY CURRENT						
I_{CCD}	Total Supply Current	EN = V_{CC} , $R_L = 100\Omega$, $C_L = 5$ pF		47	70	mA
I_{CCZ}	TRI-STATE Supply Current	EN = 0V		22	35	mA

AC Electrical Characteristics

Over recommended operating supply and temperature ranges unless otherwise specified. (Note 3)

Symbol	Parameter	Conditions	Min	Typ	Max	Units
t_{PHLD}	Differential Propagation Delay High to Low	$R_L = 100\Omega, C_L = 5pF$ <i>Figure 3 and Figure 4</i>	1.0	1.4	2.0	ns
t_{PLHD}	Differential Propagation Delay Low to High		1.0	1.4	2.0	ns
t_{SKD1}	Pulse Skew $ t_{PLHD} - t_{PHLD} $ (Notes 5, 6)			20	200	ps
t_{SKD3}	Part to Part Skew (Notes 5, 7)			0	60	ps
t_{SKD4}	Part to Part Skew (Notes 5, 8)				400	ps
t_{LHT}	Rise Time (Note 5)	$R_L = 100\Omega, C_L = 5pF$ <i>Figure 3 and Figure 5</i>	200	320	450	ps
t_{HLT}	Fall Time (Note 5)		200	310	450	ps

t_{PLZ}	Disable Time (Active Low to Z)			3	25	ns
t_{PZH}	Enable Time (Z to Active High)			25	45	ns
t_{PZL}	Enable Time (Z to Active Low)			25	45	ns
t_{DJ}	LVDS Data Jitter, Deterministic (Peak-to-Peak) (Note 9)	$V_{ID} = 300mV$; PRBS = $2^{23} - 1$ data; $V_{CM} = 1.2V$ at 800Mbps (NRZ)		100	135	ps
t_{RJ}	LVDS Clock Jitter, Random (Note 9)	$V_{ID} = 300mV$; $V_{CM} = 1.2V$ at 400MHz clock		2.2	3.5	ps

Note 1: "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. They are not meant to imply that the device should be operated at these limits. The table of "Electrical Characteristics" specifies conditions of device operation.

Note 2: Current into device pins is defined as positive. Current out of device pins is defined as negative. All voltages are referenced to ground except V_{OD} and ΔV_{OD} .

Note 3: All typical are given for $V_{CC} = +3.3V$ and $T_A = +25^\circ C$, unless otherwise stated.

Note 4: Output short circuit current (I_{OS}) is specified as magnitude only, minus sign indicates direction only.

Note 5: The parameters are guaranteed by design. The limits are based on statistical analysis of the device performance over the PVT (process, voltage and temperature) range.

Note 6: t_{SKD1} , $|t_{PLHD} - t_{PHLD}|$, is the magnitude difference in differential propagation delay time between the positive going edge and the negative going edge of the same channel.

Note 7: t_{SKD3} , Part to Part Skew, is defined as the difference between the minimum and maximum specified differential propagation delays. This specification applies to devices at the same V_{CC} and within $5^\circ C$ of each other within the operating temperature range.

Note 8: t_{SKD4} , Part to Part Skew, is the differential channel-to-channel skew of any event between devices. This specification applies to devices over recommended operating temperature and voltage ranges, and across process distribution. t_{SKD4} is defined as $I_{Max} - I_{Min}$ differential propagation delay.

Note 9: The parameters are guaranteed by design. The limits are based on statistical analysis of the device performance over the PVT range with the following test equipment setup: HP8133A (pattern pulse generator), 5 feet of RG142B cable with DUT test board and HP83480A (digital scope mainframe) with HP83484A (50GHz scope module). The HP8133A with RG142B cable exhibit a $t_{DJ} = 21ps$ and $t_{RJ} = 1.8ps$.

DS90LV001 Pin Descriptions (SOIC and LLP)

Pin Name	Pin #	Input/Output	Description
GND	1	P	Ground
IN -	2	I	Inverting receiver LVDS input pin
IN+	3	I	Non-inverting receiver LVDS input pin
NC	4		No Connect
V _{CC}	5	P	Power Supply, 3.3V ± 0.3V.
OUT+	6	O	Non-inverting driver LVDS output pin
OUT -	7	O	Inverting driver LVDS output pin
EN	8	I	Enable pin. When EN is LOW, the driver is disabled and the LVDS outputs are in TRI-STATE. When EN is HIGH, the driver is enabled. LVCMOS/LVTTL levels.
DAP	NA	NA	Die Attach Pad or DAP (LLP Package only). The DAP is NOT connected to the device GND nor any other pin. It is still recommended to connect the DAP to a GND plane of a PCB for enhanced heat dissipation.

Typical Applications

Backplane Stub-Hider Application

10133811

Cable Repeater Application

Application Information

MODE OF OPERATION

The DS90LV001 can be used as a "stub-hider." In many systems, signals are distributed across backplanes, and one of the limiting factors for system speed is the "stub length" or the distance between the transmission line and the unterminated receivers on the individual cards. Although it is generally recognized that this distance should be as short as possible to maximize system performance, real-world packaging concerns and PCB designs often make it difficult to make the stubs as short as the designer would like. The DS90LV001, available in the LLP (Leadless Leadframe Package) package, can improve system performance by allowing the receiver to be placed very close to the main transmission line either on the backplane itself or very close to the connector on the card. Longer traces to the LVDS receiver may be placed after the DS90LV001. This very small LLP package is a 75% space savings over the SOIC package.

INPUT FAILSAFE

The receiver inputs of the DS90LV001 do not have internal failsafe biasing. For point-to-point and multidrop applications with a single source, failsafe biasing may not be required. When the driver is off, the link is in-active. If failsafe biasing is required, this can be accomplished with external high value resistors. Using the equations in the LVDS Owner's Manual Chapter 4, the IN+ should be pull to V_{CC} (3.3V) with 20k Ω and the IN- should be pull to GND with 12k Ω . This provides a slight positive differential bias, and sets a known HIGH state on the link with a minimum amount of distortion.

PCB LAYOUT AND POWER SYSTEM BYPASS

Circuit board layout and stack-up for the DS90LV001 should be designed to provide noise-free power to the device. Good layout practice also will separate high frequency or high level inputs and outputs to minimize unwanted stray noise pickup, feedback and interference. Power system performance may be greatly improved by using thin dielectrics (4 to 10 mils) for power/ground sandwiches. This increases the intrinsic capacitance of the PCB power system which improves power supply filtering, especially at high frequencies, and makes the value and placement of external bypass capacitors less critical. External bypass capacitors should include both RF ceramic and tantalum electrolytic types. RF capacitors may use values in the range 0.01 μF to 0.1 μF . Tantalum capacitors may be in the range 2.2 μF to 10 μF . Voltage rating for tantalum capacitors should be at least 5X the power supply voltage being used. It is recommended practice to use two vias at each power pin of the DS90LV001 as well as all RF bypass capacitor terminals. Dual vias reduce the interconnect inductance by up to half, thereby reducing interconnect inductance and extending the effective frequency range of the bypass components.

The outer layers of the PCB may be flooded with additional ground plane. These planes will improve shielding and isolation as well as increase the intrinsic capacitance of the power supply plane system. Naturally, to be effective, these planes must be tied to the ground supply plane at frequent intervals with vias. Frequent via placement also improves signal integrity on signal transmission lines by providing short paths for image currents which reduces signal distortion. The planes should be pulled back from all transmission lines and component mounting pads a distance equal to the width of the widest transmission line or the thickness of the dielectric separating the transmission line from the internal power or ground plane(s) whichever is greater. Doing so minimizes effects on transmission line impedances and reduces unwanted parasitic capacitances at component mounting pads.

There are more common practices which should be followed when designing PCBs for LVDS signaling. Please see application note AN-1108 for guidelines. In addition, application note AN-1187 has additional information specifically related to LLP recommendations.

LIFE SUPPORT POLICY

NATIONAL'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS PRIOR WRITTEN APPROVAL OF THE CHIEF EXECUTIVE OFFICER AND GENERAL COUNSEL OF NATIONAL SEMICONDUCTOR CORPORATION. As used herein:

Life support devices or systems are devices which (a) are intended for surgical implant into the body, or (b) support or sustain life and whose failure to perform when properly used in accordance with instructions for use provided in the labeling can be reasonably expected to result in a significant injury to the user. A critical component is any component in a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system or to affect its safety or effectiveness.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
