

Product Dimensions

Description

These low-cost, high-performance elements are designed for use with MAG Series magnetic bases. Together with the base, these elements form a reliable and cost effective solution to a diverse range of applications requiring a semi-permanent antenna. The antennas are designed for durability to resist the effects of outdoor environments since they will commonly be used on vehicles or in other exposed applications.

Features

- Ideal for both stationary and mobile applications
- Excellent performance
- Low cost
- Omnidirectional pattern
- Outstanding VSWR
- Securely attaches to all MAG Series bases
- Fully weatherized construction
- Attractive and durable black finish

Electrical Specifications

- Freq. Range 2.40-2.50GHz
- VSWR ≤ 2.0 typ. at center
- Impedance 50 ohms
- Connection M5 x 0.8 threaded base

Electrical specifications and plots measured on ANT-MAG-B50

Ordering Information

- ANT-ELE-S01-011

* This element requires a MAG1 Series base (sold separately)
